

## Adult CPR

1 Check for cardiac arrest

2 Call 119 and ask for Automated External Defibrillator (AED)

3 Do chest compression 30 times

4 Repeat chest compression and mouth to mouth resuscitation 30:2

If you are not confident about mouth to mouth resuscitation then do only chest compression.

## How to use AED

Turn on the power → attach pads → analyse heart rhythm → give an electronic shock

For student safety, 13 AED machines are installed in the university

1 Turn on the AED.

2 Attach the two pads.

3 Analyse the heart rhythm.

4 If defibrillation is needed → Tell any other people to stay away from the patient.

5 Press the defibrillation button → electric shock

When there is no need for electric shock or after the electric shock, do CPR immediately.
